

I have chosen to pay for service through XM Radio. Instead of paying for programming through advertising, programming is paid for by the consumer's dollars. I, as one of these consumer's, have the ability to hear traffic and weather when I am on the road through my XM satellite service. I do not want to be trying to find a local station, while I am driving, to find out traffic and weather. I can find the station out before hand through XM, and know where I need to go for that important information. The FCC is forcing television satellite communication systems to add local programming, and now are considering not allowing XM to do the same?

This doesn't make sense.

I not only want, but need to have this access, for convenience, and safety.
